

EAS SYSTEMS

Bespoke Systems

Agon Systems is the only EAS manufacturer in the world that offers a bespoke design service for your antenna.

If your retail design team is looking for an EAS system that seamlessly complements your brand identity or store concept and you have enough volume, Agon Systems can design a completely bespoke, tailor-made system for your store.

Working to your requirements

Working closely alongside your designers, Agon Systems' creative team can develop a unique system that completely complements your retail environment.

For some retailers this may mean us producing the equipment in a specific colour or adding a logo to the acrylic panels. Whilst in other cases we have given the antenna a vintage look or designed a totally new antenna just for a specific project.

As you would expect of a Swiss company, we have a great deal of pride in the work we do and take a great deal of satisfaction from fulfilling our clients' needs.

Remote Support and People Counting

Bespoke systems can be linked to an NCC to provide Remote Support, dramatically reducing the down time of the retailer's EAS system and saving the cost of sending an engineer to site. The retailer can also incorporate People Counting software, with data being sent via the NCC back to the Agon server or, if preferred, direct to an installed server at the retailer's HQ
